Berlin

A capital was divided and governed by Capitalist and Socialist ideologies historically.

After reunification, we can still tell its polycentric structure and low connectivity with spatial syntax analysis.

Allied Occupation Zones of Germany May 1945

Global Integrity of Road System

Global Connectivity of Road System

Research Objects

1. Test of how these digital technologies can be used to quantify physical features and perceptual qualities;
2. Quantify the differences in human perceptions of the built environment under the impact of major historical events;
3. Reveal the correlations between perceptual qualities and historical contexts in perspective of Berlin's planning policy.

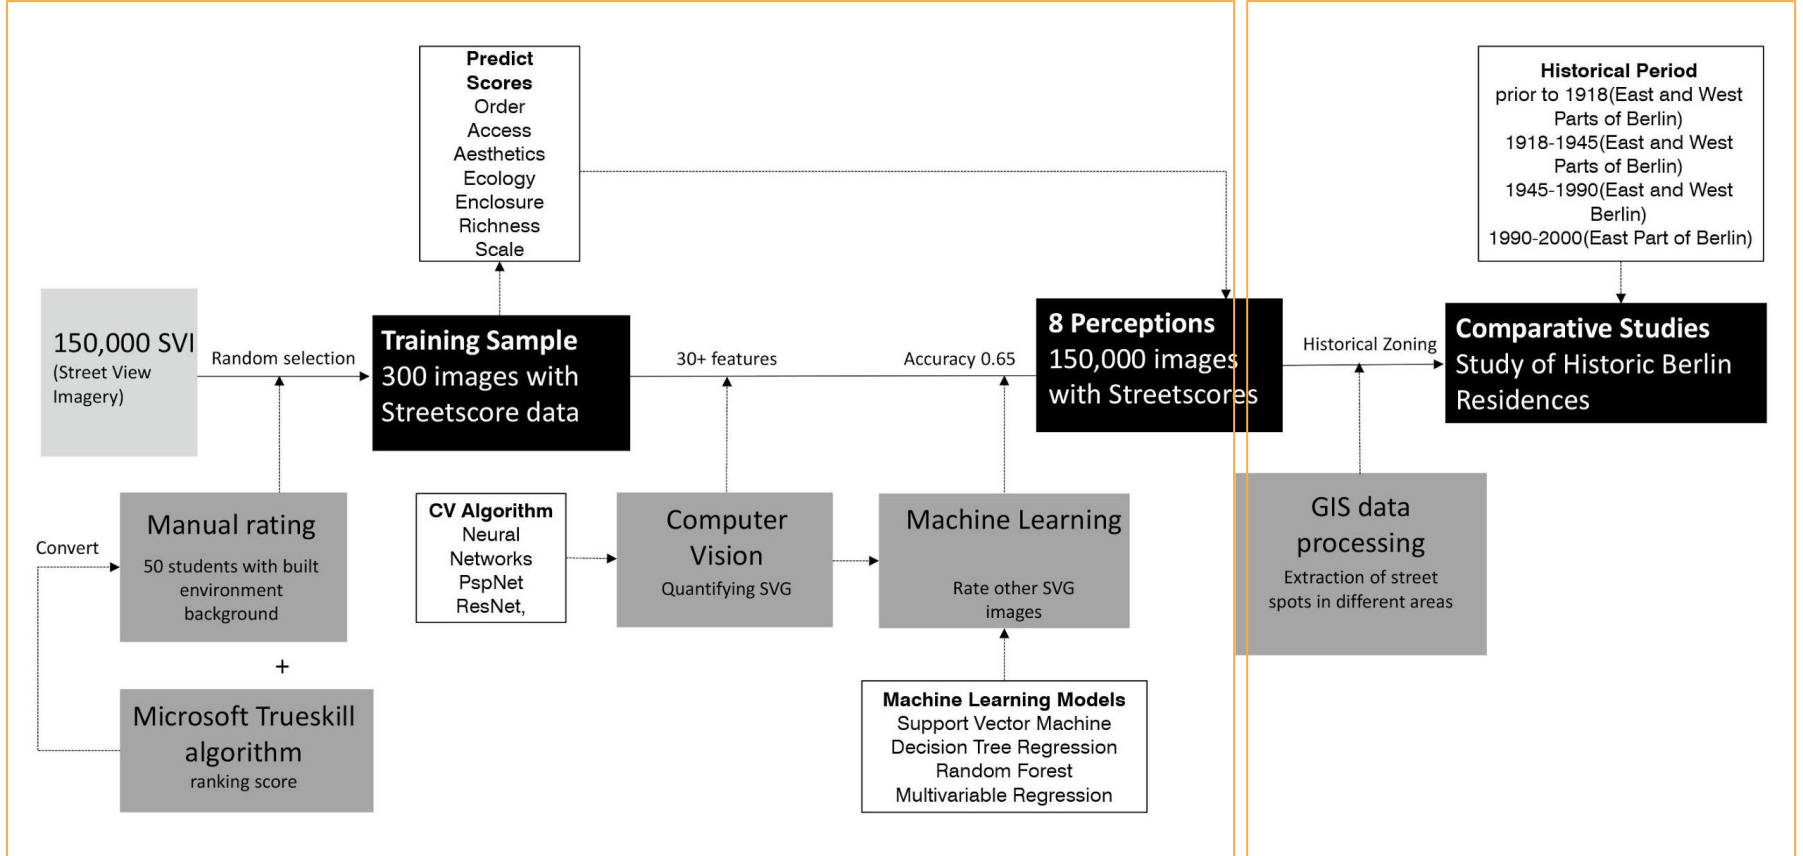

2. Methodology

Data & Method

0 | Overall Framework & Workflow

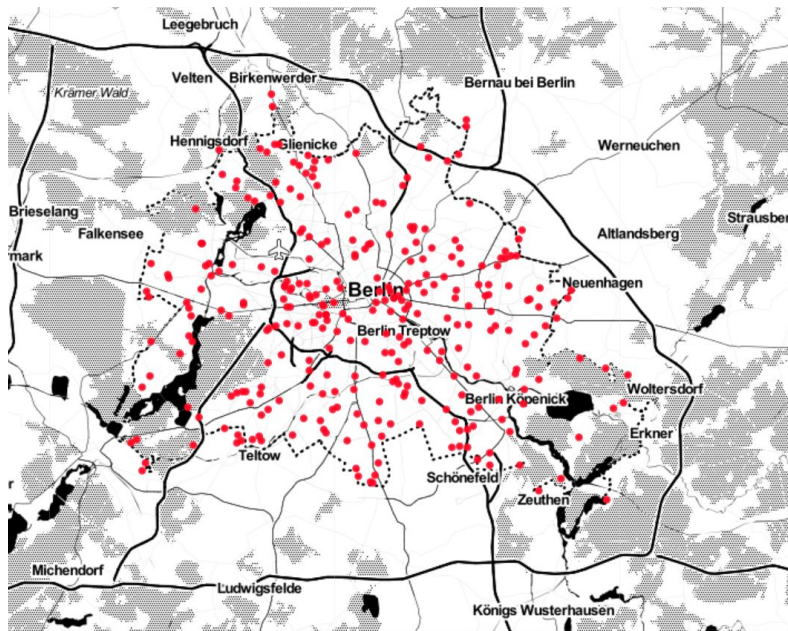

Workshop Contribution

Team Contribution

1 | Street View Image Sampling

a. Randomly sample 300 street view image points across Berlin as the training data

b. Download street view images with consistent angles and requirements from Google Static Image API

Point of view is located in the middle of the road and parallel to the road direction, control by a list of variables including ['fov', 'pitch', 'heading']

5 | Historic Residential District Zoning

We selected the streetscape data that is closest to chronological age in GIS and divided them into E1-4 and W1-3 sections.

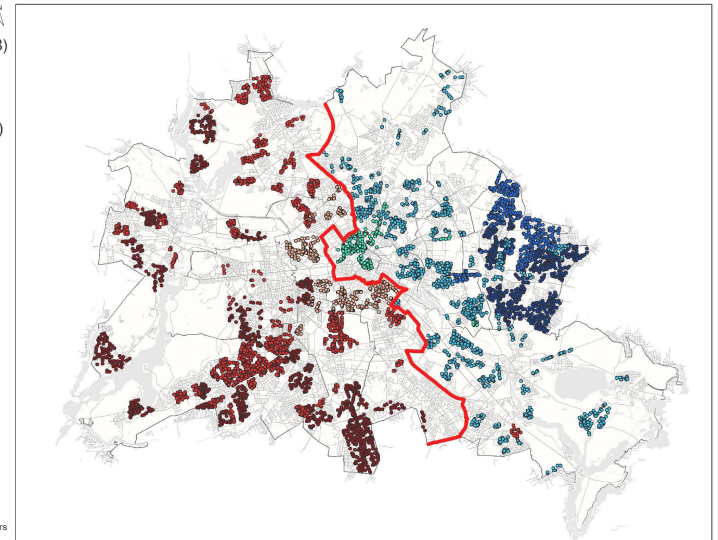

- German Empire (1871)
- WWI (1914-1918)
- Weimar Republic (1918)
- Nazi Germany (1945)
- WWII (1939-1945).
- Divided Berlin (1945-1989)

Legend

- W1 (Prior to 1918)
- W2 (1918-1945)
- W3 (1945-1990)
- E1 (Prior to 1918)
- E2 (1918-1945)
- E3 (1945-1990)
- E4 (1900-2000)
- Water Features
- Berlin Wall

0 2.5 5 10 Kilometers

3. Analysis and Discussion

Perception Data Visualization

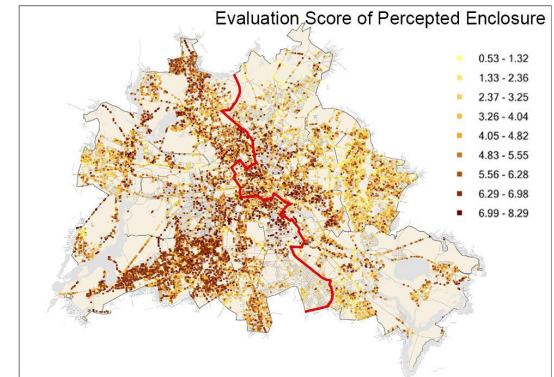

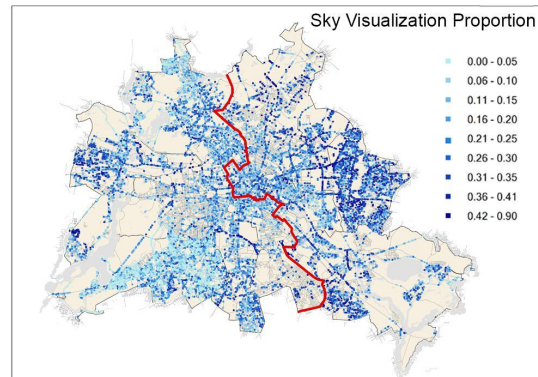

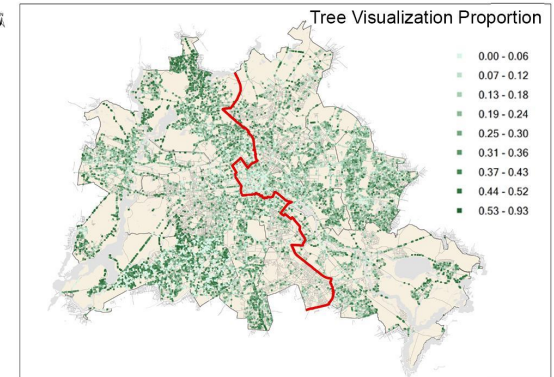

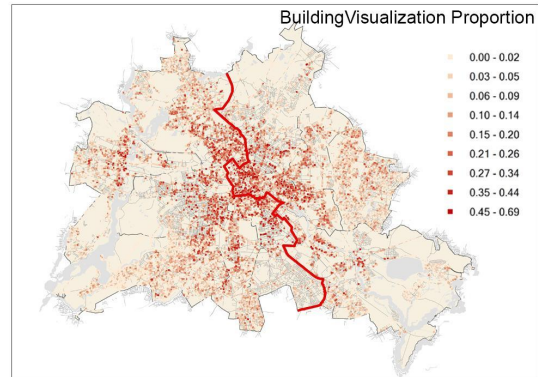

Analysis of Perceptual Qualities

Historical Context and Planning Policies

1 | Street View Perception Data Visualization

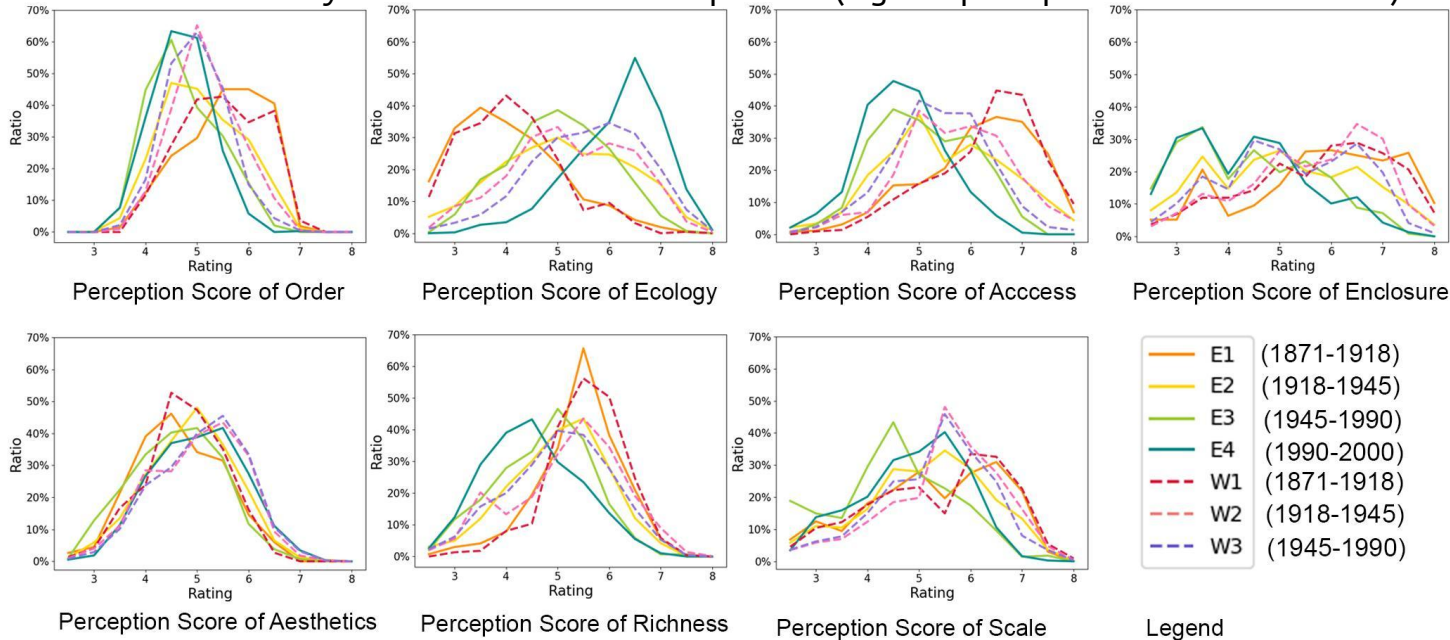

4 key streetscape features: **sky, tree, building, and road** take significant fractions in a SVI image

- **High building** visibility in the center of Berlin
- **High tree** visibility in the north and south outskirts (Frohnau and Lichtenrade)
- **High sky** visibility in the east and west outskirts (Hellersdorf and Neu-staaken)
- **Enclosure** is **positively** correlated to **building** visibility and **tree** visibility, but **negatively** correlated to **sky** visibility.

2 | Analysis of Perceptual Qualities in Different Historical Districts

- Data are moderately skewed at certain periods. (e.g. In the Perception Score of Ecology, the E1 and W1 periods have a right-skew distribution while the W3 and E4 periods have a left-skew distribution.)
- The datasets are close to a normal distribution. (e.g. the Perceptual Score of Aesthetics)
- The data are evenly distributed with no clear pattern. (e.g. the perceptual score of Enclosure)

2 | Analysis of Perceptual Qualities in Different Historical Districts

The **median score** from each period and region is selected to represent its score in the middle.

- E1 and W1 share high score in access and order but low evaluation in perception score of ecology and aesthetics.
- E2 and W2 show generally good performance in each perceptual score.
- W3 has low evaluation of order though, better performance in the evaluation of scale and enclosure compared to E3.
- E4 inherits low evaluation of order and enclosure from E3 district, but better performance of ecology and aesthetics.

Comparison of Perception Median Score							
Perception Time	Order	Ecology	Access	Enclosure	Aesthetic	Richness	Scale
East1 (1871-1918)	5.61	3.92	6.32	5.87	4.64	5.49	5.32
East2 (1918-1945)	5.03	5.11	5.38	4.84	4.90	5.11	5.23
East3 (1945-1990)	4.62	5.02	5.04	3.74	4.65	4.82	4.46
East4 (1990-2000)	4.70	6.31	4.62	3.74	5.00	4.41	5.02
West1 (1871-1918)	5.46	4.02	6.51	5.89	4.76	5.59	5.59
West2 (1918-1945)	5.08	5.22	5.69	5.72	5.11	5.34	5.58
West3 (1945-1990)	4.95	5.68	5.38	5.06	5.17	5.11	5.44

3 | Associate Perceptual Qualities to Historical Context and Planning Policies

Hobrecht Plan (1862)

Define public and private spaces
High parcel density
Low score in Ecology and Aesthetics
High score in Access and Order

The Weimar Republic

Building reform movement
High quality of housing standard
"Berlin Modernism Housing Estates"
Good in each perceptual score

West Berlin & East Berlin

Soviet urban planning ('Plattenbau')
Low score in Scale, Enclosure, & Aesthetics
High score in Ecology

Interbau 1957 (Hansa District)
"City of Tomorrow"
Urbanity-through-density
High score in Ecology, Scale, Richness & Aesthetics

German Reunification

Visually change Plattenbau facades
Reconstruct the central city
Single-family houses and smaller apartments
Low score in order and enclosure
Better performance in ecology and aesthetic

German Empire of 1871 to the Weimar Republic 1918

The Weimar Republic 1918 to World War II 1945

West Berlin & East Berlin 1945-1990

Federal Republic of Germany in 1990

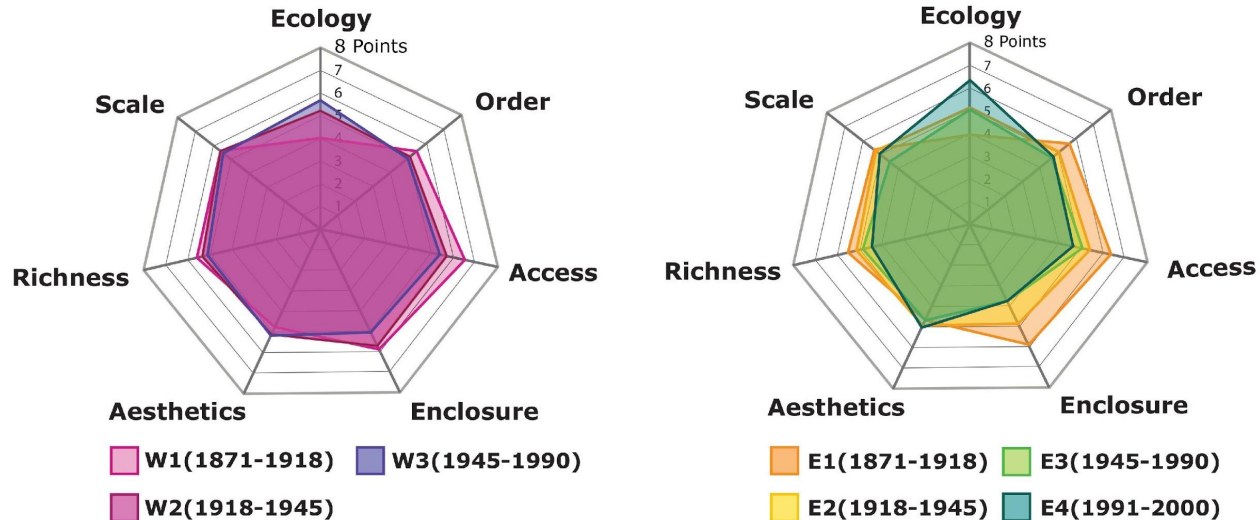

Federal Republic of Germany in 1990

4. Conclusion

1 | Finding

- The increase of ecology and enclosure represents housing policies and design codes have improved overcrowding densities, created more open spaces, and developed a better ecological environment since the post-war period.
- The west part of Berlin showed consistent results with the east part at the same period until Berlin was divided in 1945. The housing estates built in E3 represents low evaluation of enclosure, aesthetics, richness and scale.
- Though the government attempted to integrate the urban landscape of East Berlin to West Berlin after the reunification, people's perceptions can still tell the difference of the urban features which respond to their construction characters and historical contexts.

Thank you!

Q & A
